

Requesting a Hydrant Flow Test

Who needs to apply for flow test information?

- Engineering firms that design water systems for new development.
- Firms that design fire protection systems for buildings.

When and how should I apply for a hydrant flow test?

- At least two weeks before you need the test results.
- Complete the Hydrant Flow Test Application.

How long does it take to get the results of the hydrant flow test?

- If we have data from a recent test that was performed at or in the vicinity of your project's site, we will provide you with those test results. A test is considered recent if it was performed within the past year unless significant changes have occurred within the transmission system.
- If a new test is required, it will be scheduled and conducted in the order it was received by the Engineering Department's Utility Division. You will receive the test results within two weeks.

Can we perform the test ourselves?

- Yes, however, a Hydrant Flow Application is required so that the department can arrange to witness the test. It will take up to two weeks for the test to be scheduled for witnessing by the department. After conducting a private test, please forward a copy of the test's results to the following address:

**York County Engineering Department Utility Division
6 South Congress Street
York, South Carolina 29745**

How will I be notified of these results?

- Typically, the results are sent via email or fax, but can be sent in the mail if desired.

Further questions? Please contact the York County Engineering Department Utility Division at (803) 684-8571.
